

Public Sharing and Collaborative Development

Toward the end of the portfolio-development process, once I had a complete draft in place, I actively sought feedback from my TBL module team, The Terrific Twos. Patricia Quigley graciously offered her feedback. The conversations provided both positive and constructive feedback. Patricia identified strengths within the portfolio, including the documentation of learning, use of technology, and the scholarly comparison of TBL with other active learning approaches. More importantly, the discussion prompted me to revisit several sections of the portfolio to ensure that learning outcomes were not only identified but explicitly connected to the accompanying artifacts and evidence of learning. The conversation also highlighted opportunities to strengthen the use of TBL-specific terminology within my lesson plan. Through sharing work publicly with a peer, inviting critique, and incorporating feedback into subsequent revisions, I was able to refine both the portfolio itself and my understanding of the assessment expectations.

To make the exchange between Patricia and me accessible within the portfolio, I used Microsoft Copilot to organize the transcribed audio messages and typed WhatsApp messages into a coherent conversation. The reconstruction is based on the accompanying screenshots and transcripts. Screenshots are included below as the original evidence. Minor edits were made for readability without changing the substance of the exchange.

Note: I was unable to find a public sharing area on the Moodle. So while I was unable to share with the entirety of the class, I was able to share and collaborate with my team.

Portfolio Feedback Conversation with Patricia Quigley

Patricia reviewed the complete portfolio and identified three areas for attention: making the links between artifacts and learning outcomes explicit, using TBL terminology more consistently in the lesson plan, and checking alignment against the sometimes inconsistent assessment documents. Our discussion also tested my interpretation of the scholarly-introduction requirement. I retained the broader comparison of TBL with other active-learning approaches because it demonstrates critical framing, while revising the Documentation of Learning and lesson terminology in response to her feedback. Selected original messages are retained below as evidence of the exchange.

Ryan:

Hi Patricia, it's Ryan. Have you been able to take a look/read through my portfolio yet?

Patricia:

I have read it Ryan. I thought it was very good. You are so far ahead of me. I'm last minute.com here!

Ryan:

Any feedback?

Patricia's First Audio Message:

Patricia:

Hi Ryan, hope you're well.

I hope you don't mind my sending a voice message rather than typing it all up.

I've been at my own assignment all day, but I did read your assignment, and I thought it was very good.

I really liked your Documentation of Learning. I thought your Use of Technology section was very good. Your references were good, and the lesson plan was good as well.

The only area I have a question about is the scholarly introduction.

When I look at the rubric section called "Integrated Scholarly Introduction and Documentation of Learning," it says:

Provides a substantial academic introduction framing the TBL lesson within Level 9 scholarship.

My question is whether "framing the TBL lesson" means the lesson we're designing, or TBL generally.

You've interpreted it as TBL generally, and I actually think you're probably correct.

Maybe I'm reading it too literally.

I'm going to have another look through before I give more feedback because when I first read it, I was mainly looking at the quality of the work rather than hunting for things that were missing.

Honestly, I don't think there is anything major missing, but I'll have another scan through it and send another message.

Patricia:

(uploads rubric photo)

You see how it says in the text that the scholarly introduction should explain how TBL principles informed your unit design?

Patricia:

(uploads second rubric photo)

Then here it just says the TBL lesson, which sounds much more general.

Patricia:

Have a look back over your Documentation of Learning to make sure you are referring to the TBL module learning outcomes.

Ryan:

I am finding that there are a lot of contradictions in the rubrics.

Patricia:

Same here.

Ryan:

You mentioned looking back over my Documentation of Learning to make sure I'm referring to the TBL learning outcomes.

I explicitly list the learning outcomes and then provide the artifacts.

I'm uncertain what you mean.

Patricia:

I think you need to discuss them in a sentence or two rather than simply list them.

I know you have listed them, but the rubric says to link them.

That suggests to me that they may be expecting a little bit more discussion around how the artifact demonstrates the learning.

Ryan:

Ok! That's good!

Ryan:

I used a lesson-plan model that we use at SAIT, but I can certainly change some of the wording.

Patricia's Second Audio Message

Patricia:

Also Ryan, in your lesson plan I would use the language of TBL.

Instead of calling something a participation exercise, call it Application Exercise 1.

I noticed they were quite particular about their terminology during the module.

I looked up a lesson-plan template myself and changed some of the wording so it matched the wording they use in TBL.

Patricia's Third Audio Message

Patricia:

It makes sense to use the lesson-plan structure that you use for work.

You've listed objectives, and that's how I would have learned to write lesson plans as well.

But I think they specifically want us to call them Learning Outcomes.

Even the summary section at the end makes me wonder whether they might expect wording around peer feedback or evaluation.

I'm just thinking about the stages of TBL.

Anyway, you're so far ahead of me.

You've done great work.

Honestly, bringing all of this together into one coherent document was a real achievement because this assignment isn't straightforward at all.

I feel like I'm constantly referring to three different instruction documents at once.

Ryan:

This is great feedback. Let me know when I can repay you!!

Patricia:

I will!

Thank you in advance for any feedback you can give me as well.

I'm having some trouble accessing the LMS, so I may end up rebuilding the lesson from scratch.

Not a huge issue, just annoying.

Tomorrow I'm planning to focus on the introduction and Documentation of Learning.

Once I'm happy with it I'll send it to you for feedback.

It might be tomorrow evening Irish time.

By the way, what time is it there in Canada?

Ryan:

I'm seven hours behind.

It's 3:25 pm here.

Ryan:

I think what I'm going to do for the lesson plan is explain that I'm integrating TBL into the lesson-planning framework that SAIT uses.

If I were actually teaching TBL at SAIT, I'd use the BOPPPS model.

Context matters.

Patricia:

Good idea.

Ryan:

Now that I'm looking at the rubric, I interpret it as asking for a scholarly introduction to TBL rather than an explanation of the lesson plan itself.

Based on what AnneMarie said in class, that's how I read it.

I also wanted to take it in a slightly different direction by comparing TBL to other active-learning approaches and discussing where it might be stronger or weaker.

Patricia:

I forgot to tell you something.

I thought the comparison you did with other active-learning models was a real strength in your introduction.

Revisions Following the Conversation

Following our conversation, I revised the Documentation of Learning to explain more clearly how the artifacts demonstrate achievement of the module learning outcomes. I also reviewed the lesson plan to ensure that some of the terminology was consistent with the TBL process but I also wanted to stay consistent with lesson planning at SAIT.

Feedback for Patricia

I enjoyed providing feedback to Patricia. I started by using my iPad to annotate my notes in her PDF, then I voice recorded my thoughts and used the transcript as the notes. I then used ChatGPT to summarize the notes in a way that was clear and understandable. Screenshots of parts of the feedback interaction are below.

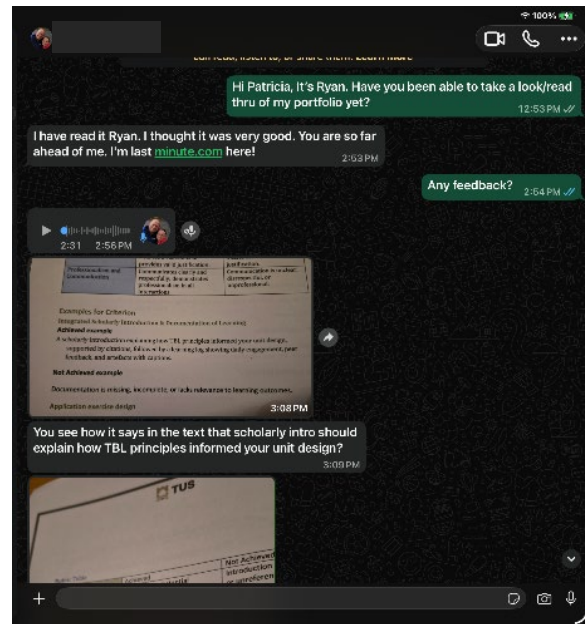

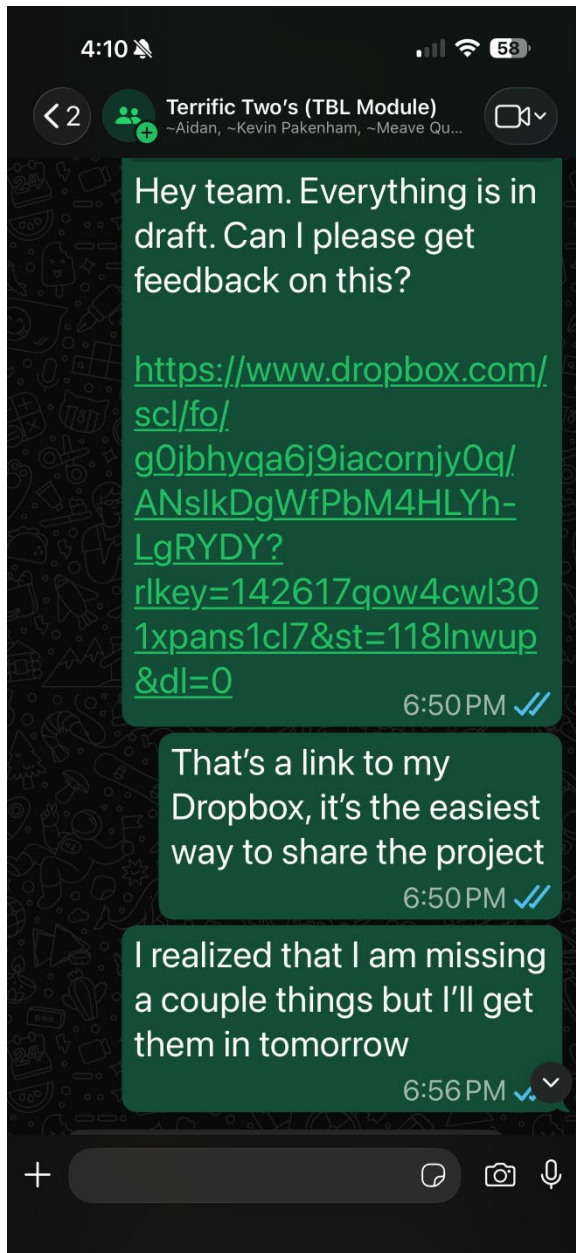

For her scholarly introduction, I highlighted its clarity and thoroughness, the balanced discussion of TBL's strengths and limitations, and particularly strong sections on peer accountability, team community, graduate attributes, and practical strategies for managing different rates of student progress.

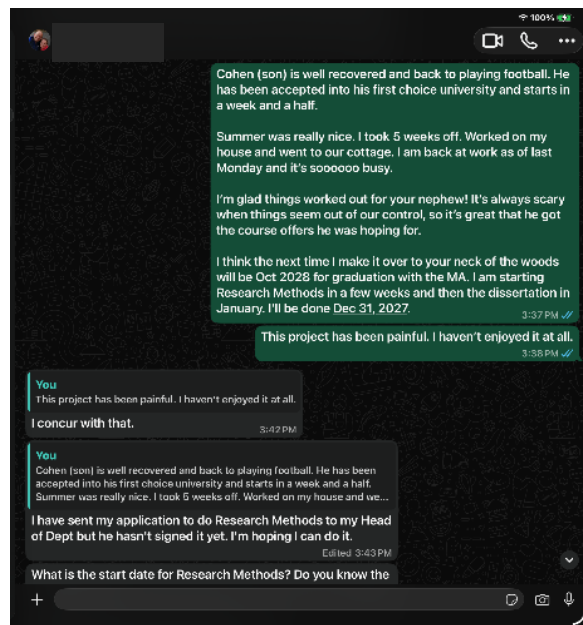

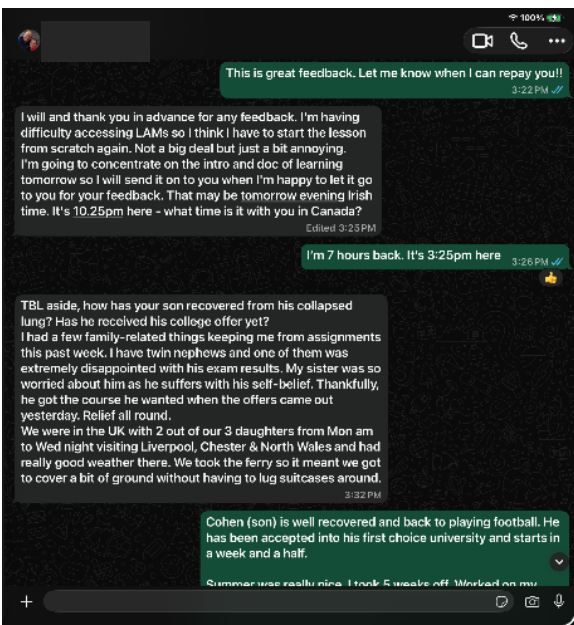

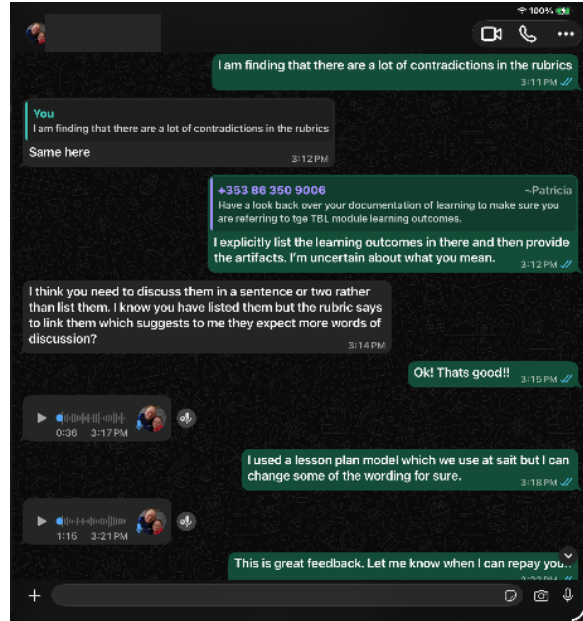

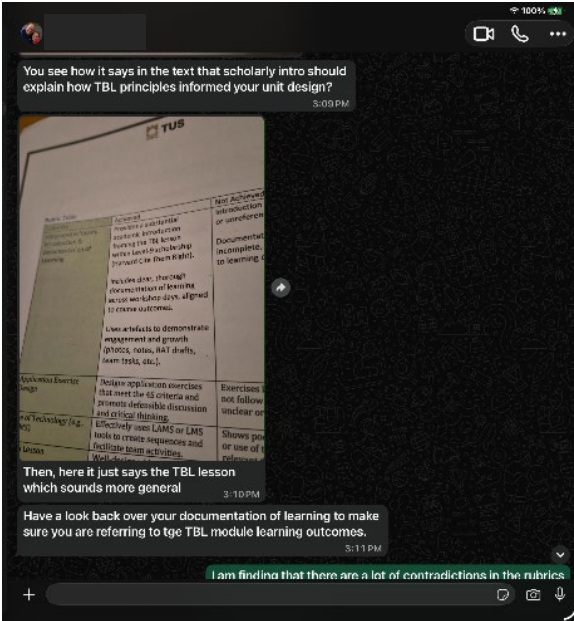

My main suggestions for her documentation of learning were to strengthen a few claims with evidence or comparison, clarify some wording, and add nuance where the literature may present different perspectives. In particular, I encouraged Patricia to revisit claims about team formation, student buy-in, classroom configuration, preparation materials, and the effectiveness of TBL relative to other approaches.

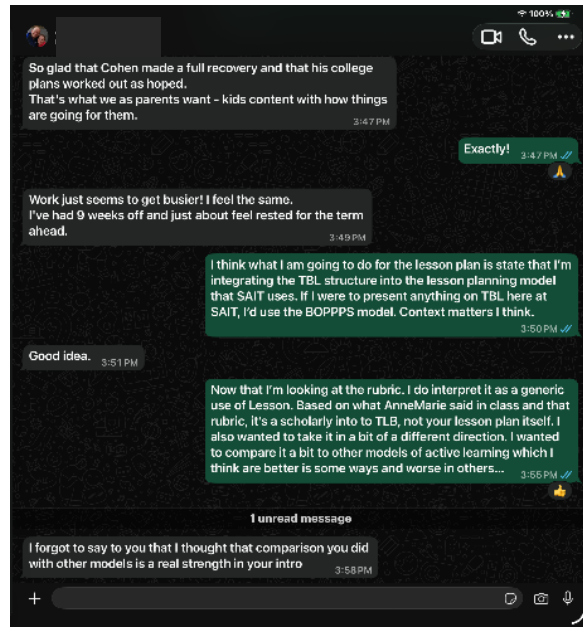

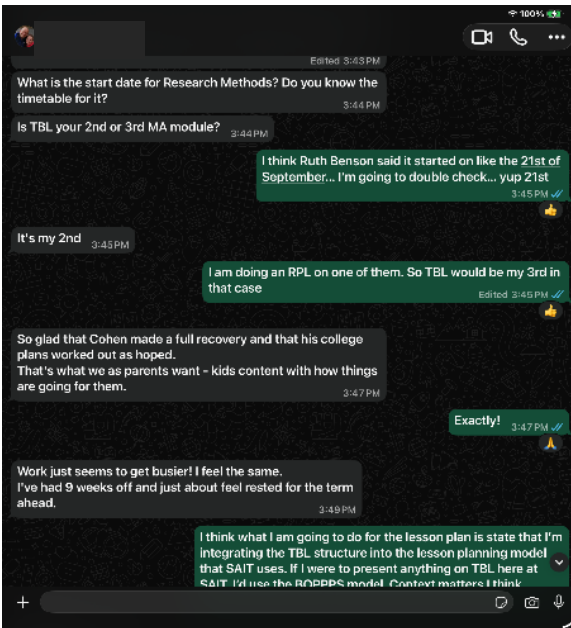

Reflection on Collaborative Development

Sharing the complete draft was valuable because Patricia approached the portfolio as both a colleague familiar with TBL and a reader encountering my evidence for the first time. Her questions helped identify areas where the connections were clear to me but were not yet explicit within the portfolio. Our discussion also provided an opportunity to work through areas where the assessment documents appeared open to interpretation.

Artifacts

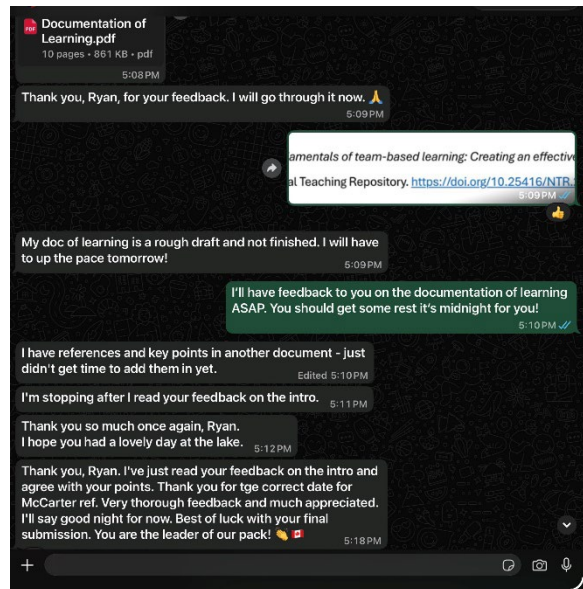

Above: Feedback from Patricia given through audio and within WhatsApp. Screenshots show the interaction.

Below: Feedback to Patricia is shown here as she passed PDFs to me in WhatsApp, I would review and make notes within the PDF, then do a voice recording and use the transcript in ChatGPT to create notes for Patricia. There is a snippet from the WhatsApp chat, the ChatGPT notes and the PDF annotation. Transcript is difficult to read and intentionally left out.

other workshop activities developed your capacity to meet the outcome.

Main Revision Notes

The most useful revisions from this feedback are:

1. Return to your initial skepticism about LAMS and explicitly explain whether and how your thinking changed.
2. Consider discussing the administrative/facilitation demands of LAMS if they align with your own experience.
3. Add visual evidence of the pre-readings where appropriate.
4. Explicitly connect your 50% iRAT experience to the feedback you later gave a peer about pre-reading instructions. This is a particularly strong example of learning being transferred into practice.
5. Connect the improvement from iRAT to tRAT with relevant evidence about the benefits of team decision-making in TBL.
6. Ensure backward design, ABC/ABCD, Bloom's taxonomy, and other theoretical models are appropriately referenced.
7. Give enough explanation around application-exercise images so readers understand what the artifact demonstrates.
8. Consider adding a gallery walk photograph if appropriate and available.
9. Give greater prominence to your shift toward seeing yourself as a facilitator, particularly what caused that change and what it means for your future practice.
10. Describe TBL as an intentional, interconnected sequence of learning activities, rather than simply a sequence.
11. Use the contrast between your first and second LAMS experiences to demonstrate development over time.
12. Retain and potentially strengthen the reflection on empathy with learners: the reviewer identified this as a particularly meaningful TBL practice more explicit
13. Make the evidence for critically evaluating your own and others' TBL practice more explicit

+ Ask ChatGPT

potentially acknowledge both perspectives.

Main Revision Notes

The most useful changes to consider are:

1. Add comparative or quantitative context when describing TBL's effectiveness, where evidence permits.
2. Consider mentioning Michaelson's experience implementing TBL in large, fixed-seat lecture theatres.
3. Verify or support the claim about TBL saving or using time effectively.
4. Consider changing "enhancing teaching" to language focused on student learning or student experience.
5. Describe preparation materials as not only accessible but carefully curated and manageable in quantity.
6. Update the McCarter citation to McCarter (2022).
7. Clarify the explanation of the student appeals process and how it helps instructors address misunderstandings.
8. Check the evidence comparing randomly selected versus instructor-selected teams, particularly whether short- and long-term outcomes differ.
9. Consider whether initial resistance to instructor-selected teams differs from longer-term student buy-in and engagement.
10. Retain the practical strategy for managing groups that finish activities at different speeds; this was identified as a strength.
11. Revisit the claim about physical classroom limitations and check the assigned reading that suggests motivated students can make TBL work even in less-than-ideal spaces.
12. Preserve the sections on peer countability, team community, graduate attributes, and the balanced discussion of

6:03 PM Sun Aug 10

9:55 AM

My learning since the module finished on 11 June last has centred on reading journal articles and identifying where and how I could integrate team-based learning into other subject areas that I teach. I chose to study Team-based Learning with a view to creating learning sessions on my own that would benefit my students. Over three days, my view shifted from that individual output that I had envisaged to an appreciation of the multiple perspectives that featured in our teamwork. This engagement has continued with some members of the team and members of other teams. This was a new experience for me as previously, modules were parked once they were finished and continued only in my own application of what I had learned to lecture and tutorial preparation.

Given the time constraints of studying modules while working full-time and having a

our continuous collaboration and communication speaks to the community built in TBL!

5:08 PM Sun Aug 10

10:55 AM

Notwithstanding the numerous advantages of team-based learning, the method presents challenges to instructors in the practical management of teams and activities. I love a good challenge!

Team formation and motivation:

Managing student resistance to team formation poses a significant challenge to instructors if students are dissatisfied with being in a team that does not include their friends (PMC, 2025). This may cause a delay in buy-in by the students to the initial settling of the team and instructors need to plan strategies to increase student engagement at this crucial juncture. is random buy-in better?

Staggered activity completion times:

It is not guaranteed that teams will work at the same pace and finish activities within the same timeframe. Managing the progression through the lesson's activities will occasionally require preparation of extra activities to distribute to teams that have finished earlier. Good solution: it was staggered so that was.

Management of less optimal learning spaces:

In third level institutions, classroom design in older buildings is not always conducive to team-based learning. Fixed rows of seating in lecture halls or inflexible free standing desks in tutorial rooms impact negatively on the seating arrangement required for cohesive and participatory teamwork.

I think one of the pre-reading PDFs indicated that TBL was so good that students would work in a room with no windows.
